## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims fail to include at least one conductor and recording site to definitely claim an electrode as set forth in the preamble of the claims. Claims 25 and 26 fail to reference the method in the preamble.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4, 5, 7, 9, 11, 13, 14, 17, 19, 21, and 22 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Swanson (6,973,342). The basic electrode including first layer 70, second layer 50 and third layer 58 is disclosed by the reference. The first may include a stiff, second portion which is laminated thereto (see column 4, lines 37-45) and forms a tip of the electrode. The electrode further includes multiple prongs.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Swanson (6,973,342). The use of a transducer in lieu of an electrode would have been obvious to the skilled artisan since such transducers are well known in the art to monitor any number of desired variables.

Claims 8, 12, 20, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swanson (6,973,342) in view of He et al (2006/0173263). The use of a benzocyclobutene for the flexible material would have been obvious substitution to the skilled artisan since He et al (provisional application) disclose the use of the same for such a purpose.

Claims 10, 18, and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swanson (6,973,342) in view of Kipke et al (2003/0100823). The use of a silicon for the stiff material would have been obvious substitution to the skilled artisan since Kipke et al disclose the use of the same (layer 14) for such a purpose in neural electrodes.

***Allowable Subject Matter***

Claims 2, 3, 15, 16, 23, and 24 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
